Swiss Equipment Manufacturer Unveils New Building

Ste. Germain De Granham, Quebec, Canada – VC999 Packaging Systems, a leading equipment manufacturer for the food processing industry, has announced the completion of a new 20,000 square foot warehouse expansion. The additional space will accommodate approximately 1200 pallet positions and house an office on the second floor.

VC999 will use the new building to manufacture its line of premium food packaging equipment, including chamber machines, tray sealer machines, shrink tanks and the popular Rollstock Thermoformer. With its new facility, the company will build upon its tradition of manufacturing efficient and user-friendly machines that address each customer's specific packaging needs.

VC999's new warehouse meets the highest quality standards for the industry. The building was specifically designed to meet the LEED (Leadership in Energy and Environmental Design) criteria. VC999 chose the finest materials for the project in order to ensure better air quality for the warehouse. Not only does the building meet LEED standards, but it also meets CT-Pat standards and HACCP rules for warehousing. The new building even surpasses the North American standards for insulation and general construction.

VC999 is headquartered in Herisau, Switzerland and has additional offices in the United States, Mexico and South America. For more information, please check out their Web site at www_vc999_com.
